HTML5, CSS, JavaScript , React.js,
Tailwind CSS

● Database

MongoDB

● Back End Technology

Node.js, Express.js

● Tools & Platforms

Git & GitHub, VS Code, Postman, Netlify

PROJECTS

Food Delivery Website.

This project is a modern food delivery website. The website provides a smooth and user-friendly experience with features like search, filtering, real-time cart updates. It focuses on fast performance, responsive design, and an intuitive interface to make ordering food easy and convenient for users.

Authentication

Built a secure authentication module using Node.js, Express.js, and MongoDB (Mongoose). Implemented user signup and login with bcrypt password hashing and JWT token generation. Authentication tokens are stored in HTTP-only cookies with proper security settings, and logout functionality clears authentication cookies.
